

Editor Note Volume 3 Issue 1

Ian James Martins *

The articles published in Volume 3, Issue 1 maintain the high standards for peer-reviewed journals. These articles are related to Pulmonary Tuberculosis, Animal Models, COVID-19 vaccines, Dentistry Data Analytics and the Psychosocial Impact of COVID-19 in children. The effort and expertise of these authors contribute to clinical and medical research and is the cornerstone of the scientific process with relevance to peer-review by medical researchers and healthcare professionals. The research question in these articles are important and appropriate to the journal and adhere to journal standards and to the top 10% of papers published in the medical field.

Chronic diseases such as obesity, diabetes, and neurodegenerative diseases are expected to increase in the next 30 years and non-alcoholic fatty liver disease (NAFLD) to reach between 30-40% of the global population. These chronic diseases in the developing world are a major concern with COVID-19 infection and may lead to multiple organ disease syndrome and the severity of COVID-19 in these individuals may be associated with gene inactivation and linked to programmed cell death. The range of topics covered in this volume are relevant to general practitioners in a rural setting who must be well versed in these areas of medicine. The volume serves as a source for COVID-19 interventions, data analytic education and COVID -19 vaccine safety issues. These articles provide readers in urban and rural areas access to continuing medical education in medical research that enhance informed clinical decision-making especially with relevance to the COVID-19 global epidemic.
